

## **ABSTRACT OF THE DISCLOSURE**

Various embodiments of a computer system employing bundled prefetching are  
5 disclosed. In one embodiment, a cache memory subsystem implements a method for  
prefetching data. The method comprises the cache memory subsystem receiving a  
request to access a line of data and determining that a cache miss with respect to the line  
occurred. The method further comprises transmitting a bundled transaction on a system  
interconnect in response to the cache miss, wherein the bundled transaction combines a  
10 request for the line of data and a prefetch request.
